NEW PRODUCTS

FIBROPOWER® / Reinforced Concrete Building Strengthening System

FIBROPOWER® offers an alternative method for seismic strengthening of deficient reinforced concrete columns using Glass Fiber Reinforced Mortar (GFRM) applied through a spraying method. Results show this method effectively increases both strength and ductility, even in deficient reinforced concrete columns with an aspect ratio of 5. This solution is the result of a public-private partnership. It will accelerate the development and adoption of new technologies and methods, leading to safer and more resilient buildings in earthquake-prone regions.

FIBROSHIELD® / Lead-Free Radiation Shielding

FIBROSHIELD® is an innovative radiation shielding material that seamlessly integrates into your infrastructure. Whether prefabricated as an exterior panel or applied as a dry-mix plaster, FIBROSHIELD® provides versatile solutions for robust radiation protection. Its advanced composite structure acts as an effective barrier against harmful radiation types in various environments, from medical facilities to residential basements. With FIBROSHIELD®, you can turn any wall into a secure shield, combining functionality with easy installation for a safer future.

FIBROBARRIER® / Noise Barrier

Designed with the latest acoustic technology, FIBROBARRIER® specializes in absorbing and dispersing disruptive sounds. Whether in bustling cities or alongside busy highways, this pioneering solution effectively reduces noise, enhancing living conditions. FIBROBARRIER®'s design flexibility, ease of installation, low maintenance, and unique aesthetic appeal make it an ideal choice for residential, commercial, and municipal applications.
