

# ICM – International Congress Center Messe München

## FOYER GUIDANCE SYSTEM

The foyer guidance system consists of 6 portable and 5 permanently installed displays. Due to their locations in the entrance area, they are ideal for giving directions or posting schedules, thus eliminating the need for classic signs. Special advantage: Total flexibility when it comes to the number of screens and their locations.

The displays can be used individually or combined with the room information system.

This allows you to present your image film, product advertising or directions to your event on a variety of monitors at all important locations throughout the ICM. We feed digital content into the system and incorporate it into a playback schedule ourselves, so content may even be provided at short notice. Simply send us an e-mail or a data carrier with your content in digital format. Naturally, we would also be pleased to compile and produce text charts, presentations, animated sequences or even entire films for you.

### Specifications

#### **Foyer Ground Floor**

2 x 70" LCD displays, resolution: 1,920 x 1,080 pixels

#### **Foyer First Floor**

2 x 48" LCD displays, resolution: 1,920 x 1,080 pixels
