

EntriWorX EcoSystem

Productively plan, install and operate access solutions

One single EcoSystem for everyone

Improving productivity, collaboration and planning security:

EntriWorX, the **EcoSystem** for planning, installing and operating door systems.

Ideal for architects, planners, installers, facility management and anyone involved in the building construction process and building lifecycle.

A digital environment for collaborative working. All planning documents and access information are accessible online to everyone involved.

Planning

Efficient planning

EntriWorX Planning 360°, the web-based collaboration software, simplifies not only the design planning but also communication among all those involved in the planning and implementation of generating the door list. Time constraints, building regulations, safety requirements and ambitious customer needs are easily handled.

The technical and operational design plans can be mapped and adapted as needed, for instance by security advisers, installers or by dormakaba itself using the **EntriWorX Planner**. The tool works with predefined templates, which are then provided in the data cloud.

Installation

Faster commissioning

Installation is aided by the user-friendly **EntriWorX Setup App**.

The commissioning process is carried out step by step via smartphone or tablet. Installation errors can be systematically detected and corrected.

The core of the system is the compact hardware **EntriWorX Unit**, which significantly reduces the number of components and wiring required for the installation.

The intelligent controls save valuable installation time and increase productivity.

Operation

All data at a glance, any time

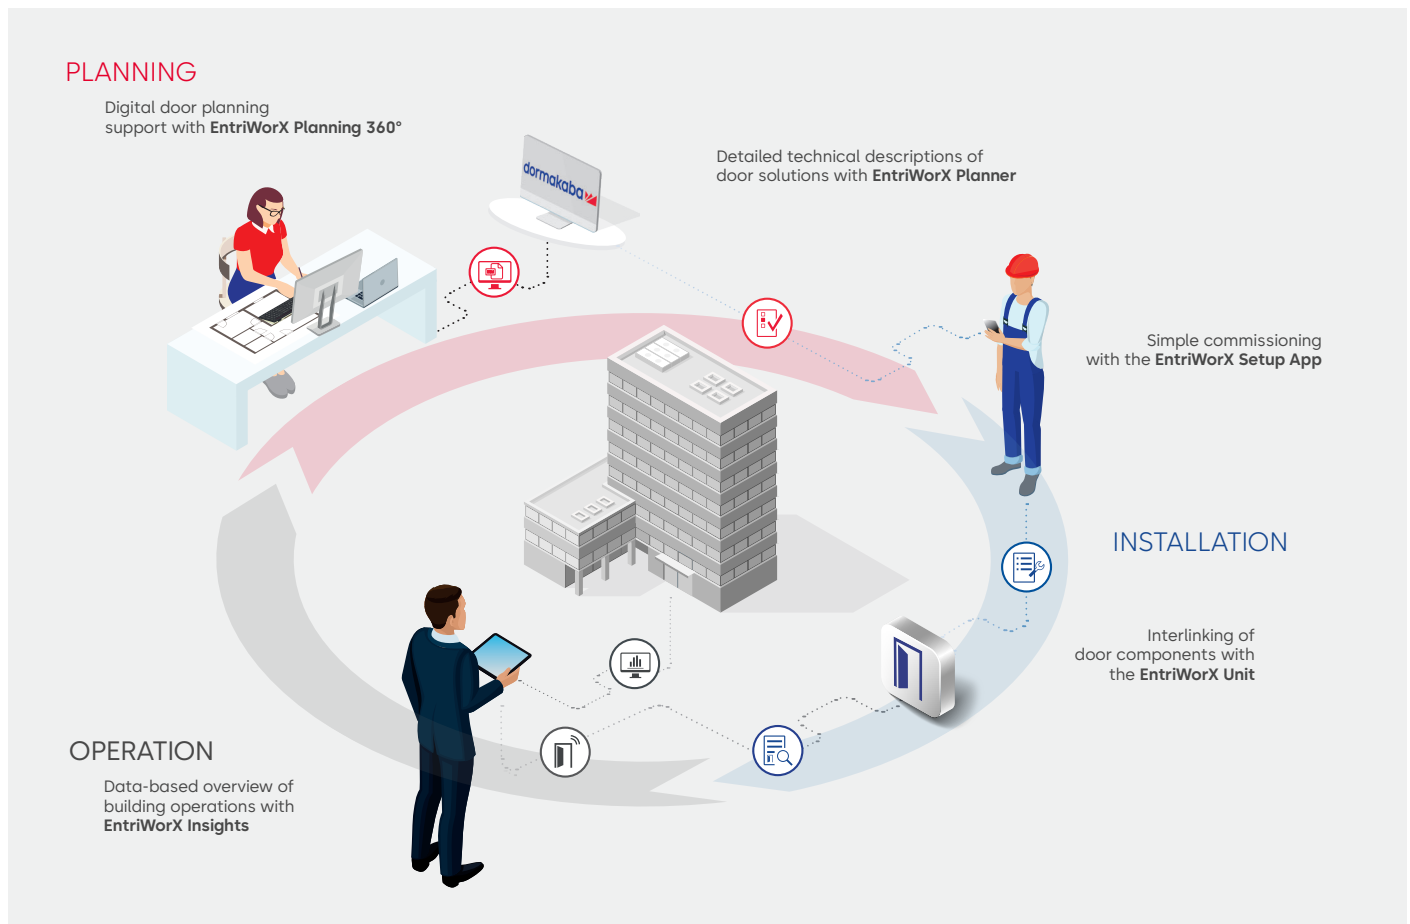

Facility management nowadays work with digital tools and processed performance information:

- Monitoring and analysis of door operation data
- Maintenance and repairs according to actual requirements of the door
- 24/7 service support from dormakaba Service with monitoring and proactive maintenance
- Integration with API interfaces

EntriWorX Insights provides more transparency and efficiency and makes it possible to operate door systems proactively based on historical data.

Factsheet

One EcoSystem for everyone

EntriWorX Planning

Digitalized and collaborative door planning

EntriWorX Planning 360°

For design planning – the new platform for efficient door schedule management during the planning process.

- Open BIM-ready, Autodesk Revit and IFC files, 2D CAD formats
- Complex situations and interdependencies can be visualized in 3D
- Effective issue management via standard interfaces such as BCF
- Easy import and export of door lists.

Curious? We'll be glad to advise you.

Architect service

EntriWorX Planner

For installation planning – this new planning software, provides all the relevant data and improves the exchange between the relevant interfaces.

- Planning with functional door models from predefined door templates
- Implementation compliant with standards and building regulations
- Visualization of access and security zones including component list and connection diagrams
- Development of technical and operational design planning

EntriWorX Installation

Digitized door installation and commissioning

EntriWorX Unit

Reduced complexity thanks to easy wiring of components

- One single device ensures that all function data are exchanged.
- Simple collaboration of different components (even from third-party providers).
- Time-saving installation due to reduced components and less wiring.

EntriWorX Setup App

The installation app for simple and quick commissioning

- Commissioning is performed step by step with a smart-phone or tablet.
- Malfunctions can be localized digitally.
- Complete documentation such as specifications, wiring diagrams, floor plans and connection diagrams, technical drawings for production, component lists and installation videos can be accessed.

Curious? We'll be glad to advise you.

EntriWorX Operation

Efficient building management thanks to access to digital doors – with EntriWorX Insights

EntriWorX Door Insights

Full access to Insights – anytime and from anywhere.

- Interruptions can be prevented proactively.
- Know instantly if a door is obstructed, emergency exit has been used, damage is detected and more.

EntriWorX Supported Service

24/7 service support with monitoring and proactive maintenance that's always on task.

- Remote support
- With information never before available without being physically on-site, your dormakaba Service department can ensure that visits are only made when they are really necessary.

EntriWorX Integrate

Integrate door data flexibly and seamlessly into your building's management or monitoring systems.

- With comprehensive data on door performance and usage delivered for your analysis via the API, you can utilize insights to act swiftly today and enhance your ecosystem for the future.

Curious? We'll be glad to advise you.
