The housing dimensions of the laser and ACCEPTOR Line laser receiver are perfectly matched. The distance between the vertical laser plane and the edge of the LINUS 1 HV is identical to that between the edge and zero line of the laser receiver. This makes it easy to check the perpendicularity of existing walls or formwork. Dimensional deviations can be read from the ACCEPTOR Line laser receiver with millimetre accuracy.

Green laser lines are four times as visible to the human eye as red lines. Owing to the excellent visibility of its green laser line, the Nedo **SIRIUS 1 HV green** rotating laser has a much bigger working range in which a laser receiver is not needed. Thanks to innovative laser technology, the laser in the **SIRIUS 1 HV green** does not have the operating temperature disadvantages that used to be typical of green lasers. The Nedo **SIRIUS 1 HV green** rotating laser can thus operate in the same temperature range as the **SIRIUS 1 HV** with red laser diodes. The Nedo **SIRIUS 1 HV green** can be supplied with a class 2 or class 3R laser.

TRIPODS

Get the Maximum Accuracy out of your Surveying Instrument

The stability of a tripod has great impact on the precision achieved with a levelling instrument, a construction laser, or a total station. Depending on the type of instrument, tripods have to meet different requirements and specifications. Bearing this in mind, Nedo has developed a unique range of tripods comprising aluminium tripods, elevating tripods, wooden tripods and practical accessories.

The crank of elevating tripods with indirect gear moves the height adjustable column via a reduction gear unit. This allows the desired height to be set precisely even with heavy-duty lasers. Furthermore, the reduction gear unit prevents any unintentional descent of the laser when the locking screw is opened.

The indirect gear is a particularly convenient solution, especially when using heavy-duty rotating lasers.
